

## **Junior Software Engineer**

- **Department:** Operations / Reporting to CTO
- **Salary:** Starting from £30k

### **About us**

Subtv is a youth broadcasting channel delivering an audience of 1.2M 18-24's across TV, digital and mobile platforms in the UK. Our broadcasting network consists of 80+ sites in Universities nationwide. We offer a range of innovative, technical solutions to engage students in and outside of university.

### **Your role:**

You will use a variety of different technologies across our products and services to write and maintain our codebase - written in Kotlin and Go. You will also be responsible for our web applications that use Angular (with TypeScript) and build up experience working on Kubernetes, Cloud SQL and Cloud Datastore through our Google Cloud infrastructure. As you begin to develop your wider skills, you will start to take on larger projects that encompass all areas of agile development from design to development to testing.

### **Personal Profile**

- Self-starter with the confidence to make technical decisions.
- Passionate about technology, keeping up with the industry and bringing things that might be of interest.
- Comfortable working with technologies that are unfamiliar, willing to learn.
- Able to understand requirements from non-technical stakeholders in the business and translate them into a workable solution.

### **Skills**

- Experienced with core Java development, familiar with or willing to learn Kotlin
- Experienced with designing RESTful APIs
- Familiar with relational databases such as MySQL and Postgres
- (Preferred) Experience with frontend development using Angular
- (Preferred) Familiar with Google Cloud Platform
- (Preferred) Familiar with Docker, Kubernetes
- (Preferred) Experience with using Go
